* NOTE: This record contains 55 individual

* sequencing reads that have not been assembled into

* contigs. Runs of N are used to separate the reads

* and the order in which they appear is completely

* arbitrary. Low-pass sequence sampling is useful for

* identifying clones that may be gene-rich and allows

* overlap relationships among clones to be deduced

* However, it should not be assumed that this clone

* will be sequenced to completion. In the event that

* the record is updated, the accession number will

* be preserved.

It currently consists of 4 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

This sequence will be replaced

* by the finished sequence as soon as it is available and the accession number will be preserved.

* 48026 48125; sap of 100 bp

* 88307 88406; contig of 40181 bp in length

* 88407 98916; contig of 10510 bp in length

* 88407 98916; contig of 10510 bp in length

* 99917 146632; contig of 47616 bp in length.

Marker stdd60b23T7 (Primer A : GAATGCTTTGTACTTGCTGGTGG; Primer B :
CACAGGTCATTCATCATGAAGC; amplimer size : 128 bp) is from sequence

generated from the T7 end of PAC 606D23, 606D23 is part of the
bacterial clone contigs constructed by the Chromosone 20 Mapping

Group.(http://www.sanger.ac.uk/MGP/Chr20/) 606D23 is from the
library RPC14 constructed at the Roswell Park Cancer Institute by

the group of Pieter de Jong.

/note="Glycos_transf_2; Region: Glycosyl transferase.
Diverse family, transferring sugar from UDP-glucose,
UDP-N-acetyl - galactosamine, GDP-mannose or CDP-abequose,
to a range of substrates including cellulose, dolichol
phosphate and teichoic acids"
                                                                                                            Clone distribution: MGC clone distribution information can be for through the I.M.A.G.B. Consortium/LLNL at: http://image.llnl.gov Series: IRAK Plate: 128 Row: j Column: 23
This clone was selected for full length sequencing because it passed the following selection criteria: Hexamer frequency ORF analysis, Similarity but not identity to protein.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations where differences are found these are annotated as variations together with a note of the overlapping clone mame. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with ordrives as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality) = 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats, all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em; EMBL; Sw;, SwiSSROT; Tr:, TREMBL; Wp;, WORNEPP; Information on the WORNEPP database can be found at http://www.sanger.ac.uk/Projects/C elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome X, constructed by the Sanger Centre Chromosome X mapping Group. //www.sanger.ac.uk/HGP/ChrX
RP11-642C7 is from the library RPCI-11.3 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm
VECTOR: pBACG3.6.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          * NOTE: This record contains 71 individual
* sequencing reads that have not been assembled into
contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Web site: http://www-seq.wi.mit.edu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      * NOTE: This record contains 87 individual
* sequencing reads that have not been assembled into
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.

* NOTE: This record contains 91 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will

/clone="Mib="Plas D802380"
/clone="Mib="Plas D802380"
/clone="This sequence represents a contig constructed by merging the sequence represents a contig constructed by merging the sequence of two Plas Clones, D802380 (D142) and D806823 (D207). The sequence of D802380 (AC003745) matches this sequence from bp 1 to bp 26119 of the contig; however, we have determined that D802380 is a chimera and the remaining nucleocities in this clone derive from another site in the genome. D806823 (D207) corresponds to bp 9214 to bp 93371 of the contig."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence Quality Assessment:

This entry has been annotated with sequence quality estimates computed by the Phrap assembly program.

All manually edited bases have been reduced to quality zero. Quality levels above 40 are expected to have less than 1 error in 10,000 bp.

Base-by-base quality values are not generally visible from the GenBank flat file format but are available as part of this entry's ASN.1 file.

Estimated insert size: 97000; pulse filed gel estimation
Bstimated insert size: 97000; pulse filed gel estimation
Quality coverage: 5.83 in Q20 bases; pulse filed gel estimation
Quality coverage: 4.65 in Q20 bases; sum-of-contigs estimation.
* NOTE: This is a 'working draft' sequence. It currently
* consists of 37 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

COMMENT

Center code: SC

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the area of the overlapping clone name. Note that the corresponding to the overlapping clone, as we submit sequences with only a small overlapping clone, as we submit sequences with This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate Web site: http://www.sanger.ac.uk Contact: humquery@sanger.ac.uk

chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em.; BMED; SW.; SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at the WORMPEP database can be found at from the RPOI-23 Mouse BAC Library constructed by the group of Pieter de Jong.

* NOTE: This is a 'working draft' sequence. It currently consists of 32 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

On Apr 22, 2000 this sequence version replaced gi:7452953.
During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations rogether with a note of the overlapping clone name. Note that the vortex ponding to the overlapping clone, as we submit sequences with conty a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information numbers generated from part of bacterial clone contigs of human thtp://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 20, constructed by the Sanger Centre Chromosome 20 http://www.annger.ac.uk/Hopfycle.clo.
This sequence is the entire insert of clone RP11-80K6 The true left end of clone RP5-91115 is at 63129 in this sequence. This sequence either entire insert of clone RP1-80K6 The true left end of clone RP5-91115 is at 63129 in this sequence. This sequence either entire insert of clone RP1-80K6 as follows unless otherwise noted: all regions were covered by high quality data file. phred quality >= 30; an attempt was made to resolve all sequencing problems, such as attempt was made to resolve all sequencing problems, such as attempt was made to resolve all sequencing problems, and the assembly was confirmed by restriction digest. RP11-80K6 is from the library RPC1-11.
                                                                                                                                                                                                                           ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   HSBABOK6 170740 bp DNA linear PRI 23-F5B-2001 Muman DNA sequence from clone RPII-80K6 on chromosome 20 Contains a putative novel gene, an RPL36 (60S ribosomal protein L36) pseudogene, ESTS, STSS, GSSS and a CpG island, complete sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,

On May 11, 2001 this sequence version replaced gi:12709924.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one Ml3 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em.; EMBL; Sw.; SWISSPROT; Tr., TERMEL; WorkPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 10, constructed by the Sanger Centre Chromosome 10 http://www.sanger.ac.uk/PROFCIII.13.1 constructed by the group of Pieter de Jong.                                                                                                                                                                                                                                                                                                                                                    NOTE: This is a 'working draft' sequence. It currently consists of 8 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
Research, 320 Charles Street, Cambridge, MA 02141, USA On Mar 9, 2004 this sequence version replaced gi:29294292. All repeats were identified using RepeatMasker: Smit, A.F.A. & Green, P. (1996-1997) http://ftp.genome.washington.edu/RM/RepeatMasker.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  91.1%; Score 16.4; DB 2; Length 176597; llarity 94.4%; Pred.
